Wheat Variety Results Meeting

(Burlington, Colo.)

One hundred bushel per acre dryland wheat! Colorado State University Extension is hosting wheat variety test plot results meetings on Tuesday August 30 and will discuss trial results that produced this yield along with the other site's results. These informational meetings will make available the 2016 Collaborative On Farm Trial (COFT) results from the nearly 20 on-farm trials that were conducted in Colorado during the 2016 season. The meeting will focus on wheat production with both dryland and irrigated results being shared.

Times and locations for the programs are Tuesday August 30 beginning at 9:00 a.m. – 10:30 a.m. at the Washington County Events Center. The same program will be held at the Burlington Community Center from 2:00 – 3:30 p.m. on Tuesday August 30th.

Topics covered will be COFT wheat variety trial results, in addition to answering the question "Should we treat our wheat seed?" Wheat variety information and seed treatment information will be discussed with specialists available to answer questions.

###

Colorado State University Extension programs are available to all without discrimination.

Colorado State University Extension is your local university community connection for research-based information about natural resource management; living well through raising kids, eating right and spending smart; gardening and commercial horticulture; the latest agricultural production technologies and community development. Extension 4-H and youth development programs reach more than 90,000 young people annually, over half in urban communities.
